

New Products

MAY 2024

We are continually expanding our portfolio to meet your research needs. *Check out* the new products released this month!

HOT PRODUCTS

CAR Enrichment Kits

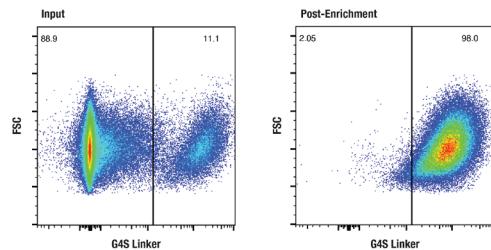

Enrich G4S or Whitlow/218 linker-transfected CAR-expressing cells

CAR (G4S Linker) Cell Enrichment Kit #48669

CAR (Whitlow/218 Linker) Cell Enrichment Kit #65686

Magnetic bead-based immunoaffinity cell enrichment is a gentle purification method that can be leveraged, in part, to facilitate a robust interrogation of the biology of immune cells that are engineered to express CARs. For example, isolation of rare subsets of CAR positive cells from a complex, heterogeneous population of cells presents the opportunity for extensive downstream analyses using single-cell omics assays. In the context of CAR cell engineering, magnetic bead-based immunoaffinity cell enrichment can also be useful in scenarios when delivery of the CAR transgene is inefficient, resulting in a small population of cells expressing the CAR transgene.

KEYWORDS: CAR-T therapy, Cancer Immunology

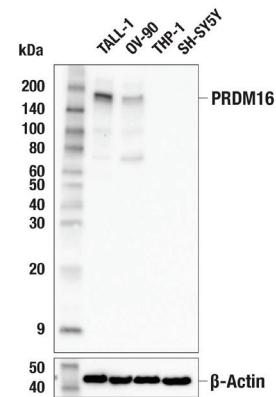

FC-L: Flow cytometric analysis of live cells in the input (left) and post-enrichment (right) for enrichment performed using biotinylated G4S Linker (E702V) Rabbit mAb. Input consists of CD4+/CD8+ human T cells containing a mixture of non-transduced cells and cells transduced with an scFv-based Anti-CD20 (Leu16) CAR containing a G4S linker. The post-enrichment sample shows a nearly pure population of cells expressing the CAR on the cell surface. Anti-rabbit IgG (H+L), F(ab')2 Fragment (Alexa Fluor® 647 Conjugate) #4414 was used as a secondary antibody to detect the biotinylated antibody.

PRDM16 (F3K9T) Rabbit mAb #16212

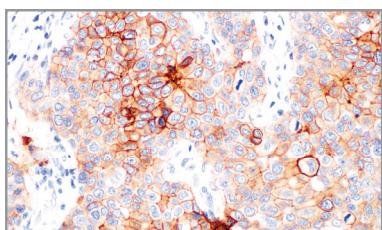

Regulates adipocyte thermogenesis, mitochondrial function, oxidative stress, and acts as a tumor suppressor in lung cancer

PRDM16 is a transcription factor that is structurally characterized by a conserved N-terminal PRDI-BF1 and RIZ1 homology (PR) domain and a variable number of zinc fingers. The PR domain bears similarities to the catalytic suppressor of variegation 3–9, enhancer of zeste, and trithorax (SET) domain that is found in a group of histone methyltransferases. Indeed, PRDM16 has been shown to catalyze mono-methylation of histone 3 at lysine (H3K9me1). PRDM16 is involved in the regulation of various biological processes, including adipose biology and energy homeostasis. This protein is also expressed in hematopoietic stem cells (HSCs) and plays a key role in the establishment and maintenance of these cells. More recently, PRDM16 was shown to be a suppressor of lung adenocarcinoma metastasis, and its low expression predicted poor prognosis of lung adenocarcinoma patients.

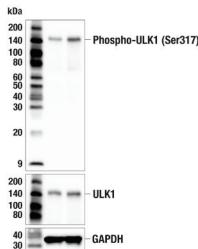

KEYWORDS: Adipogenesis, thermogenesis, mitochondria, oxidative stress, cancer.

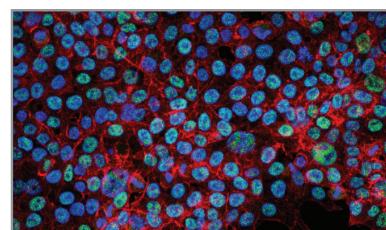

WB: Western blot analysis of extracts from various cell lines using PRDM16 (F3K9T) Rabbit mAb (upper) or β-Actin (D6A8) Rabbit mAb #8457 (lower). Low expression of PRDM16 protein in THP-1 and SH-SY5Y cells is consistent with the predicted expression pattern.

TACSTD2/TROP2 (F4W4J) Rabbit mAb #76730

Phospho-ULK1 (Ser317) (F1Z6C) Rabbit mAb
mAb #89267

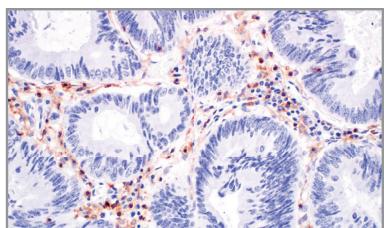

USP22 (F4M4V) Rabbit mAb #52293

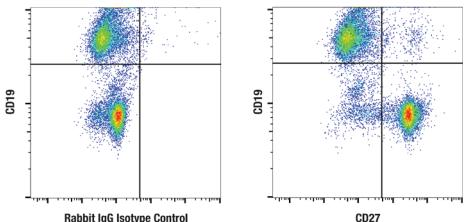

PRODUCT	APPLICATIONS	REACTIVITY

NEW!

Mouse Targets FOR SignalStar™ Multiplex IHC

SignalStar™ Multiplex IHC: Mouse Targets:

We just added mouse targets to our flexible, ready-to-go SignalStar™ Multiplex IHC panels. Now whether you're using human or mouse models, CST has you covered for your spatial biology research.
